ADOPT A STREAM IN 2017

Our local rivers and streams play an important role in not only the ecosystem, but also our quality of life. Clean water and a natural river system keeps us healthy, offers us fun recreational opportunities (boating, fishing, swimming), and makes our communities safe by handling storms naturally.

Adopt a Stream is a program to invite people to monitor the health of their local stream. Adopters can:

- Monitor stream flow/level
- Monitor stream water temperatures
- Monitor water pH
- Observe any and all day to day conditions to notice anything unusual
- Lead a local clean up day

MRWC will help you get started and provide support as volunteers continue to care for their local adopted stream. MRWC will provide an Adopter with a rugged stream thermometer, a pH test kit for 50 samples, a volunteer guide booklet, data sheets, and tips on caring for your stream. MRWC would ask that all season data be submitted to MRWC for review and analysis.

Our goal is to recruit Adopters through the spring and launch this program by the middle of May. So if you wish to participate, please SIGN UP!
See our web site under “About the Watershed-sub watersheds” and go to streams list to see your local stream.

THANK YOU.
